

“Visit to Micron, Hyderabad”

Weekly Learnings 27 / 2025

Anand Ramamoorthy, The CEO invited me to visit the Micron Hyderabad campus to chat with his team on the topic "The Future Organization"

This is a 16 floor rented building housing 5000 employees and an excellent experience centre. Micron is into memory chips. Of the 5000, 400 are people managers

1. They are a 50 year old company from Boise, Idaho, USA
2. Their revenue is about \$30 billion, they want to be the best memory company on the world. They want to transform the way you use information.
3. They were the first technology company to invest in an Indian chip plant in Sanand Gujarat. Total Investment is about \$2.7 billion. The plant will despatch this year.
4. They have 58,000 patents and the number is growing. The India team is adding significantly to that number proudly.
5. Micron has 11 manufacturing sites globally, India is one of them
6. Micron partnered with Intel to create IM flash solutions.
7. The chips from the sanand plant will go to data centers, smartphones, notebooks, EV 2 wheelers and the Internet of Things applications. Their products will be in all digital products you use.
8. They are expanding rapidly. They are a good company to work with, current attrition in single digits. If you are into chip design etc, they are looking for you!!
9. Every employee in this Hyderabad office gets a Rs 150 per day food coupon which they redeem in the lovely canteen. I got my branded coffee, picture attached.
10. They have a consumer brand "Crucial"

Pictures attached from their office and excellent experience center

Thanks Anand and team, loved our interaction.
